

1      **ABSTRACT OF THE DISCLOSURE**

2            A hinge assembly includes a fixing seat and a rotation seat rotatable in relation  
3            to the fixing seat. The fixing seat has a fixing plate for connection to a mainframe of an  
4            electronic device, a rotation shaft securely connected to the fixing plate and having a  
5            limiting flange formed on a mediate portion of the rotation shaft, and a limiting disk  
6            securely mounted on the rotation shaft and having two limiting edges. The rotation seat  
7            has a body rotatably mounted on the rotation shaft and having two connection legs each  
8            rotatably received in two tubes and an extension to selectively engage with either one of  
9            the limiting edges to limit a rotation angle of the body to the fixing plate and leaf springs  
10          mounted on the rotation shaft.
